

STAT:5400 Computing in Statistics
Fall 2015
Instructor: Cowles
Information on Midterm 1

- Midterm 1 will be given in the PC lab, 41 Schaeffer Hall, on Wed. Sep. 30 from 3:30 - 5:20.
- You are required to do the midterm in the Linux environment. You must use NX Client to log into one of the Linux lab machines from the workstations in the PC lab.
- The midterm will cover the following topics:
 - Linux
 - \LaTeX and \BibTeX
 - Sweave
 - R commands, functions, and packages
 - writing your own R functions
- You may use notes, on-line resources, code you've written for homeworks; in short, anything except other people!
- You will submit your midterm by uploading your .Rnw file and PDF file into ICON. In addition, submit your R code as a separate .txt file. If your .Rnw file doesn't compile correctly, you will still get partial credit as long as you upload the R code (and any output you were able to get) and .Rnw file.
