

SASweave Demo

Russ Lenth

April 19, 2007

This illustrates basic use of SASweave to embed some SAS code and its output:

```
SAS> proc univariate data = sashelp.shoes;  
SAS>   var sales;  
SAS>   ods select moments;
```

The UNIVARIATE Procedure
Variable: Sales (Total Sales)

		Moments	
N	395	Sum Weights	395
Mean	85700.1671	Sum Observations	33851566
Std Deviation	129107.234	Variance	1.66687E10
Skewness	3.94185882	Kurtosis	24.5888987
Uncorrected SS	9.46854E12	Corrected SS	6.56746E12
Coef Variation	150.649921	Std Error Mean	6496.08993

We can also easily include graphics...

```
SAS> proc gplot data=sashelp.shoes;  
SAS>   plot returns * sales;
```
