The final exam will be given Thu 5/15/2014, 7:30 AM - 9:30 AM, in W128 CB (That is the Chemistry Building).

The final is cumulative. All material mentioned in the descriptions of the midterms could also appear on the final.

There definitely will be questions on material covered since Midterm 3. This includes inference for regression and ANOVA.

Questions will be mostly short answer and multiple choice. Some will involve interpreting SAS output that I will provide.

You may bring:

- up to four 8-1/2 x 11 sheets of paper with your own notes (the three from your midterms, plus one more)
- the normal, t, chi square, and random digit tables from your textbook
- a calculator

Short answer questions and interpretation of computer output will be similar in style to homework problems. Doing unassigned textbook problems would be an excellent way to prepare for the exam.
