Midterm 2 will be given Mon. 3/31 in class.

It will cover the following portions of the textbook and class material:

- Chapters 8-11 (omit Statistical process control), 14-15 the textbook
- material covered in class through lecture 14
- Note: one-sample t confidence intervals will be included.

Questions will be mostly short answer and multiple choice. Some will involve interpreting SAS output that I will provide.

You may bring:

- one 8-1/2 x 11 sheet of paper with your own notes.
- the random digit, normal and t tables from your textbook
- a calculator

Short answer questions and interpretation of computer output will be similar in style to homework problems. Doing the practice problems and unassigned textbook problems would be an excellent way to prepare for the exam.
